Ultrasonic - Lipolysis

Ultrasonic-Lipolysis is clinically proven that uses multiple frequencies for non-invasive fat reduction and body contouring. It is a safe and simple procedure that works effectively in both men and women. The unique technology operates by sweeping specific ultrasound frequencies that are created by dedicated software that operates on variable levels of low frequencies in order to reach the resonant effect for Dynamic Cavitation. This mechanical action helps breakdown the adipose membranes, destroying fat cells and triglycerides, while the surface is protected via Skin Contact Cooling. This procedure is pain-free and requires no downtime, which means patients can immediately resume their daily routines. It is not only a fast and easy way to lose weight but also a safe alternative to liposuction surgery as there is no anaesthesia or surgical risks involved.

The Ultrasonic-Lipolysis system uses multi-frequency waves for selectively rupturing adipocyte membranes without affecting surrounding structures. Triglycerides and cell debris from disrupted fat cells are processed by the body's natural physiological and metabolic pathways. The dissolved fat is then naturally excreted. At the same time, the skin becomes suppler and tighter, giving skin a younger and more toned appearance.

Depending on the size of the area treated : the average number of treatment range from 6 to 10 sessions are recommended for overall enhanced results.

Results vary based on your body type and the severity of the condition. on the average, based on conditions, the results can be seen in two or three sessions. For certain conditions you may see results immediately.

Advantages of Ultrasonic-Lipolysis :

- Non - invasive, safe and simple
- Visible result
- Fast and effective procedure
- Pain - free due to skin contact cooling
- No downtime
- No adverse effects

Cellulite Reduction, Intense Pulsed Light, BOTOX, Thermage, Ultrasonic Lipolysis, Laser, ClearLight, Tummy Tightening Filters, Excessive Sweating, Hair Regrowth, Hand Smoothing, Laser Hair Removal, Neck Firming, Lower Jaw Reduction CoolTouch, Veins & Tattoo Removal, Laser Skin Resurfacing, Vaser LipoSelection, smarLipo, Thread Lift, Breast Filters
